

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method of reconstructing visual stimuli observable through a browser-based interface, comprising:

~~finding a unique instance of an article;~~

calculating a two-dimensional boundary of a parent window based on its previously recorded two-dimensional size;

creating a container of the two-dimensional size; [and]

enumerating [a web page] through previously recorded graphical images; and

writing the images to the container.
2. (Currently Amended) The method of claim 1 wherein the enumerating enumerates a child window.
3. (Currently Amended) The method of claim 1 ~~wherein finding~~ locates online content using a network address comprising arranging the images based on the previously recorded two-dimensional size.

4. (Currently Amended) The method of claim ~~1~~ ~~3~~ ~~wherein the instance of the article is associated with a specified time period~~ comprising arranging the images based on a previous location of the images.

5. (Canceled)

6. (Canceled)

7. (Original) The method of claim 1 further comprising:
retrieving a graphical image of a child web page;
writing a content of the child web page to the container; and
arranging the child web page with the container to create a modified container.

8. (Currently Amended) A [method of reconstructing visual stimuli observable through a browser-based interface] computer readable medium comprising instructions for[, comprising]:

~~finding a unique instance of an article;~~

calculating a two-dimensional boundary of a parent window;

creating a container of the two-dimensional boundary; [and]

enumerating [a web page] through at least one previously recorded graphical image;

writing the image to the container; and

adjusting the image.

9. (Currently Amended) The method of claim 8 wherein the adjusting arranges the image based on a two-dimensional position at which it was originally recorded.

10. (Original) The method of claim 8 further comprising retrieving a child web page having a native size and native aspect ratio.

11. (Currently Amended) The method of claim 8 wherein the adjusting adjusts the two-dimensional arrangement of the image by moving the image horizontally.

12. (Currently Amended) The method of claim 8 wherein the adjusting adjusts the two-dimensional arrangement of the image by moving the image vertically.

13. (Currently Amended) The method of claim 8 wherein the adjusting [the image] changes the container size.

14. (Original) The method of claim 8 further comprising masking the image.

15. (Currently Amended) The method of claim 14 wherein the masking colorizes [the] areas of the image left void by [the] a placement of any child web pages.

16. (Currently Amended) The method of claim 14 wherein the masking colorizes [the] areas of the image that were not exposed through a browser-interface at a point in time.

17. (Original) The method of claim 8 further comprising iterating to a next detected event and reconstructing a second visual image.

18. (Original) The method of claim 8 further comprising adjusting the image to reflect an image analysis.

19. (Currently Amended) A system of reconstructing visual stimuli observable through a browser-based interface, comprising: Memory in a computer system that maintains data capable of transforming a computer system into a visual stimuli reconstruction system, by:

finding a unique instance of an article;

means for calculating a two-dimensional boundary of the interface;

means for creating a container based on the boundary; [and]

means for enumerating [a web page] through previously recorded graphical images; and

means for writing the images to the container.

20. (Currently Amended) The [computer] system of claim 19 further comprising means for adjusting the image.

21. (New) The system of claim 19 further comprising means for enumerating through each instance of a particular image at a specified period of time.

22. (New) The system of claim 21 further comprising means for masking portions of the container that were not displayed at the specified period of time.
